For Best Results When Making Dipsy Dog

1. Always use a dry hot dog. This is very important
2. The directions are on the back of every box. Each individual box is 5lbs of dry mix.
3. First combine 3 lbs (1.5 quarts) of cold water with a full box of Dipsy Dog in a mixing bowl.
 - If mixing with a machine, use a wire whip and mix on a low speed for 1 minute and then scrape the bowl.
 - Then change the speed to a medium speed and mix for 2 minutes. At this point the batter should be smooth.
4. Let the batter stand for 10 minutes
5. Dip the hot dog in the batter and allow the excess batter to drain off. Make sure the entire dog is encased in the batter.
6. Fry the dog submerged in preheated 375 degree deep fat for about 2-3 minutes.
7. Serve hot and enjoy the sweet taste of Victor's Dipsy Dog mix.

This product can typically coat 45-50 hot dogs per 5lb box. The number of dogs coated can change based on the size of the hot dog. A typical serving size is 3tbs.
